 Tehran, Iran

Key Skills

C++ / Qt

Node.js /
React.js

Dart / Flutter

Linux

Python

Profile

Experienced software engineer with over six years of hands-on work in C++ and the Qt framework. Skilled in designing, building, and maintaining both large industrial applications and fast MVPs for startups. Comfortable working with international teams and managing projects across different time zones. Proficient in modern development tools, including Linux environments, CMake, CI/CD pipelines, Git, Docker, and cloud services.

Strong background in both desktop and web development, using technologies such as Python, Flutter, Node.js, and React. Experienced in automation, SCADA, and ERP systems, with a proven ability to research new technologies and implement innovative solutions. Capable of leading projects from concept to delivery, and able to document and optimize systems for long-term success. Always open to new challenges and committed to high-quality work.

Professional Experience

Sep 2024 – Present

Remote

Senior Software Developer Freelance

Throughout my freelancing career, I was involved in a range of projects, from addressing minor issues in open-source software and startup MVPs to working on long-term contracts for proprietary systems in Qt and Flutter frameworks.

- Security Monitoring Client:** Experienced as front-end developer with Flutter framework creating a comprehensive security suite from scratch with a fast-paced team to design and monitor security systems including realtime camera devices, GPS devices, call center integration and other security means.
- Security Suite Server:** A hand-on experience on backend server codes with Python/Django and SQLAlchemy/Redis with a bunch of integrations to other services and API endpoints to provide a fine data pipeline for the client through GraphQL
- Qt Developer:** I've contributed to many small-scale Qt projects for my clients through Upwork adding features and fixing the bugs. Most of them had direct connection to motors, camera devices and robots to provide automation solutions for the clients.

Skills: C++, Qt, Python, Flutter

Senior Software Developer at I&L Biosystems GmbH

As a Senior Software Developer at I&L Biosystems, I played a pivotal role in enhancing and maintaining a desktop industrial application developed within the Qt framework. During my tenure, I accomplished the following:

- **Application Maintenance:** Managed the maintenance of a robust desktop industrial application, ensuring its seamless functionality and reliability. Collaborated with cross-functional teams to address user-reported issues promptly.
- **Framework and Library Upgrades:** Led the upgrade efforts for Qt-based dependent libraries, enhancing the application's performance and ensuring compatibility with the latest technologies. Additionally, refactored complex sections of the code to improve maintainability and efficiency.
- **Build System Optimization:** Implemented optimizations in the build system using CMake, streamlining the development process and reducing build times. This resulted in increased productivity and a more efficient workflow.
- **Collaborative Agile Development:** Actively participated in Agile methodologies, attending weekly meetings, and contributing to JIRA boards. Effectively communicated with team members, addressing project issues, and ensuring alignment with project goals.
- **Web-based development experience:** contributed to some web-based tasks, including server management, writing web scrapers, development of some Shopify apps and admin panels with Javascript frameworks.

Skills: C++, Qt, Javascript, Node.js, React.js, Shopify app development, Web Crawling, Web server maintenance

Aug 2019 – Feb 2022

Software Developer at Modje Niroo Company

As a Software Developer at Modje Niroo Company, I immersed myself in the research and development of automation and SCADA systems within the electrical industry, exploring the latest practical technologies utilized by related systems. During my tenure, I accomplished the following:

- **Technology Research and Strategy Design:** Conducted in-depth research on automation and SCADA systems, staying abreast of the latest industry technologies. Analyzed potential solutions for the electrical automation industry, contributing to the design of high-level documents and major strategic plans.
- **Project Implementation:** Took a hands-on approach in implementing two major projects, namely HMI Designer and HMI Player, starting from the ground up. Leveraged my expertise in Qt and integrated web technologies such as HTML, JavaScript, and CSS to create intuitive and efficient Human-Machine Interface (HMI) solutions.

Skills: C++, Qt, Javascript, SVG, CSS, Bootstrap, HMI, API, Docker

Dec 2017 – June 2019

Software Developer at Farapox Co.

During my tenure at Farapox, I contributed significantly to the development of an evolving ERP system, leveraging the Qt framework. Key responsibilities and accomplishments include:

- **Component and Module Design:** Designed and implemented crucial components and modules, such as Vertical Grid and Master Detail Dialogs. These additions were instrumental in fortifying the ERP system and Applications Framework.
- **Comprehensive Documentation:** Documented all developed components meticulously using Doxygen and UML diagrams, ensuring clarity in understanding and facilitating seamless collaboration among team members.
- **Build System Migration:** Successfully led the effort to port all projects from QMake to the CMake build system, streamlining the development process and enhancing project maintainability.

Skills: C++, Qt, CMake, QMake, Python

Education

Birjand University / Master of Science, 2014 - 2016

Mechanical Engineering

Sirjan University of Technology / Bachelor's degree, 2009 - 2013

Mechanical Engineering
